

Odor-Off® Bottoms-up Extractor

What is Sub-Surface Extraction?

Sub-surface extraction is used by professional carpet cleaners to thoroughly remove odor contaminants that have soaked deep into carpet padding and upholstery. Sub-surface extraction is the optimal method for completely and effectively eliminating the source of pet urine odors.

How to Remove Dog and Cat Urine Odors from Carpet and Upholstery

- 1** First, completely saturate the odor area with the diluted Thornell solution (Cat Odor-Off®, Cat Odor-Off® Fresh Scent or Dog Odor-Off®) and wait long enough for it to penetrate. Usually 3-5 minutes.
- 2** Second, connect the Odor-Off® Bottoms-up Extractor to your shop vacuum and place it on the saturated area. Extract until damp.
- 3** Third, let the area completely air dry and then evaluate. Some carpets can take up to 3 days to dry. If any odor remains the source was not contacted. Repeat the process.
